

Sean Despain

Software Developer / Full-Stack Developer

Heber, UT · seandespain@gmail.com · (435) 695-6954 · linkedin.com/in/sean-despain-560316116 · seandespain.com

Full-stack developer who ships and owns production applications end to end, from architecture through deployment through incident fixes. Built and shipped a Unity/iOS app live on the App Store, and a Next.js business platform running live integrations for four organizations, including finding and closing an authentication gap and root-causing a production-only SSR hydration bug.

TECHNICAL SKILLS

Languages/Frameworks C# (Unity), TypeScript/JavaScript, Next.js 15 (App Router), React, Astro, Node.js, Tailwind CSS

Platforms Firebase (Auth, Realtime Database), Netlify (deploy, Forms, Blobs), iOS build & App Store release, Android/Gradle

Integrations QuickBooks API, ElevenLabs (server-side TTS), OpenAI API, i18n/bilingual routing

Tooling Git/GitHub, ffmpeg media pipelines, sharp image pipelines, structured data (JSON-LD)

SELECTED WORK

Jarvis (Legacy Command Center) · Next.js 15, TypeScript, Tailwind (2025–Present)

Built a multi-organization business platform (CRM, payroll, calendar, reporting) with no traditional database; persistence runs on a mock-store + Netlify Blobs pattern. Built an integration-health monitor across QuickBooks, an internal portal API, Netlify, and ElevenLabs. Found and closed a gap where the dashboard shipped with no authentication, adding a signed-cookie session gate. Root-caused a production-only React hydration crash to a server (UTC) vs. browser (local) timezone mismatch and fixed the underlying formatting layer.

Peace Life · Unity/C#, Firebase (2021–Present)

Built a 140+ scene iOS app: Firebase-backed auth and data layer, a remote-content manifest system for post-launch updates, a freemium paywall/unlock system, custom audio-loudness normalization, and the iOS build/release pipeline. Diagnosed and fixed an iOS-only bug traced to a Unity build-stripping edge case (an EditorOnly-tagged object silently missing in device builds).

Leads to Sales AI Trainer · Unity/C#, Node.js/Express, OpenAI API (2026)

Built an AI sales-roleplay trainer for Leads to Sales while serving as its hiring manager and sales trainer; it works for any company's sales team. A six-scene Unity client (login, dashboard, scenario select, roleplay, feedback, history) talks to a Node/Express backend that uses the OpenAI API to play a realistic prospect across 11 scenarios and return structured JSON scores on five skill areas with written coaching. Weekly leaderboard and session history persist on device.

W.I.P Services Portal · Node.js (2026)

Built the portal API layer that Jarvis's integration-health system reads from, plus the site's generated-page build pipeline and image-optimization system.

Organización Qinty · Astro 7 (2026)

Built a bilingual static site with per-page JS splitting, a multilingual sitemap, and a data-driven content layer with zero hard-coded copy.

EXPERIENCE

Co-Founder, CEO, Creative & Product Lead · Peace Life · Jan 2021–Present

Hiring Manager & Sales Trainer · Leads to Sales · 2026

Founder & President · WIP Services LLC · Nov 2017–Jan 2019

Founder & CEO · Nectar CBD · Dec 2019–Dec 2021

EDUCATION & CERTIFICATIONS

Utah Valley University · Coursework in Robotics & Technology (2017–2019)
